I am planning to complete the course with cybersecurity specialization as it has lot of opportunities in the job market and secure my future as a penetration tester or security officer and then after 4-5 years of service move to the managerial role and finally start a small IT company of mine which consists of providing cybersecurity services to the world and I would leave a signature in this world before leaving it, if the company succeeds till the end. I hope the knowledge and support that I get will be enough for that and pray to God for the success of my plan in this country. The master of IT course in deakin will be a starting point for it.
